

SPAR AC

PRODUCT FEATURES

- Its swivelling idlers serve as a guide to control the direction of the belt.
- The belt is maintained on its external face by the tracks and is confined by the inside seal plate (SPARGAMAT AC).
- When the belt wanders, it presses on the tracks, the strain then transferred to the idlers causes the unit to swivel, which puts the **belt back on track, no matter its direction.**

AUTO CENTERING LOADING POINT

- Thanks to their innovative design, the swivelling idlers enable the **SPAR AC** to **automatically center the belt under any circumstances.**
- May be used alone or as part of the SPARGAMAT AC for loading points.

The **SPAR AC** idler is perfect for reversible belt conveyor with low belt speed.

Eliminating the need for manual belt adjustments **reduces the risk of accidents.**
